## $10^{\text {th }}$ International Bridge Festival Madeira

Funchal, November 5-11, 2007
$9^{\text {th }}$ November 2007

## And the winer is...

The Finns Clas Nyberg and Kauko Koistinen are the winners of this year's pairs tournament.

They won yesterday's session, making $68.67 \%$, and got to the first place in the tournament with $61.81 \%$ average. The Portuguese Juliano Barbosa and Rui Pinto were second on the last session, with $66.89 \%$. It got them from $20^{\text {th }}$ to $2^{\text {nd }}$ place overall, some $3.12 \%$ behind the Finns.

The third

place overall was
won by the estonians Leo Luks and Lauri Naber, just 0.22\% behind the Portuguese. They made $62.93 \%$ and were 4th on the last session.

The third best result on yesterday's session was achieved by the Portuguese Jorge Castanheira and Jose Dias. It got them from $57^{\text {th }}$ to $12^{\text {th }}$ place overall.

Today we have the first matches of the teams tournament - the real thing, some say.
Have you registered your team yet? Don't be late!
Pedro Nunes

## The art of being lucky

By Kauko Koistinen

We all know the secret of winning a bridge tournament. Of course you should minimize your own mistakes, but most importantly, you should simply be lucky! In the last session we made some mistakes, but they were heavily outnumbered by all the gifts we received from our generous opponents.

In the following board we didn't receive any help from our opponents, but the lie of cards was most favourable for us.

(3) Control.
(4) RKCB.
(5) 0 or 3 keycards.
(6) Trump queen inquiry.
(7) Trump queen without any unshown kings.

After six spades I could count to twelve fast tricks, so the jack of diamonds, the queen of clubs or seventh spade might give me the missing thirteenth trick. North started with the jack of spades, Clas tabled a hand without any extras so my task was far from laydown. On the actual layout, declarer can' $\dagger$ go wrong, thanks to the lucky lie in both minor suits. I took the first five tricks with dummy's spades, cashed my club honours and returned back to dummy with the ace of hearts reaching following end position:

When dummy's last spade was played, South discarded correctly a diamond (after a heart discard North would be in a genuine squeeze if he had 9xxx in diamonds) and I let my queen of hearts to go. North discarded a diamond and I took the last four tricks with diamonds. For a moment I thought that the defence slipped in the end position, but luckily my diamond suit was just strong enough to produce four tricks without any squeeze. That was $99 \%$ of the matchpoints for us, but if my diamonds were AQ86 and North keeps his nine fourth, we would have scored next to nothing from the board.

We met Carlos Gonçalves and Nuno Paz on the seventh round of the final session. They were lying second and we fifth before the last 26 boards, so it was certainly a very decisive meeting.

(4) Balanced.

Nuno Paz started with a diamond and dummy's jack held the first trick. Ace-king of hearts brought some bad news North discarding a club. Spade to the queen was followed by a spade to the jack, king and the ace. North won the next trick with the king of diamonds and Clas took the diamond continuation with the ace. West cashed the ace of clubs and threw North in with a diamond, but Nuno Paz exited correctly with the queen of clubs. As his last hope Clas tried back a club, which would have worked if North held QJxx in the suit. No luck this time, however, Carlos could claim the remaining tricks for two down and a 99\% score.

After the board Clas told me he could have made the board. Seeing all the four hands, do you find out the way to nine tricks?
Instead of throwing North in with the diamond, West should play a heart. North is forced to discard one more club and South wins the trick. South can't cash the second heart but must play back a club. Now it's time to eliminate the club suit and throw North in with diamond. Spade 10-8 will make the two last tricks, the contract just making.

Board 22 was a wild one.

We were lucky enough to buy the contract with six clubs and when South failed to lead a heart, that meant 1390 and $95 \%$ score for our side. According to the minimax the par contract in the board is six hearts doubled for three down and EW +500 . At twenty tables this excellent sacrifice was reached, giving NS almost $70 \%$ of the matchpoints. Three times E-W had bid and made an adventurous contract of six spades. I was reported that one South found the courageous lead of the four of hearts North unexpectedly winning the trick with the king. South's brave efforts were not rewarded, however, when North returned back a diamond, declarer claiming the rest. From a quick point of view it is much more probable that South would ruff a diamond return and not a club, North holding anyway six diamonds and a just singleton club. North had a blind spot, anyway, with a diamond void South would lead a higher heart of course.

Our last board was interesting. Take it first as a single dummy problem.

| $P$ | $2 \downarrow$ | $3 \vee$ | $4 \downarrow$ |
| $P$ | $P$ | $P$ |  |

West's opening bid showed a 12-14 balanced hand. East leads the two of clubs (10-12) which declarer wins with the ace. North tries the diamond jack, but East rises with the ace and defence continues with two rounds of clubs, East having originally Q62. West cashes the ace of spades before exiting with the thirteenth club. Declarer tries the seven of hearts but East contributes the eight and dummy must overruff with the queen. When the three of is played from dummy, West plays the six. What now? The contract is already one down and you are not getting a good score from this one, but two down would surely mean something like zero. Jorge Cruzeiro didn't err but finessed with the seven escaping for only one down. East's diamond bid at three level must certainly promise six cards leaving West a doubleton in that suit. Therefore West can't have two cards in hearts as well and the finesse is indicated. West's hand was: AJ83 J106 Q5 KJ98. Thanks to my partner's good lead, anyway, we scored a comfortable $85 \%$ from the last board.

## Trusting Partner

By Rodrigo Martins Soares

Carel Berendregt and Wiestke van Zwol form a fixed partnership. They also play bridge with each other occasionally. They are doing so in this tournament. I started the last session of the pairs event against them. They immediately stroke me as a nice couple. A couple of minutes later, and after confirming -1100 they didn't seem so nice any more. In fact I am quite sure that they arranged everything with my partner just to annoy me- not that I'm paranoid, but people do that a lot!

Anyway, nearing the end of the session Carel held:

- 743
- K J 10
-K 97542
- 7

And the auction went:

| $E$ | $S$ | $W$ | $N$ |
| :--- | :---: | :---: | :---: |
| $1 \leftrightarrow$ | 4 | 4 | 5 |
| 5 | $P$ | $P$ | $P$ |

His partner led the $\vee 4$ and dummy went down with:

- K 2
$\bullet 2$
- J 83
- KQ96543

When declarer followed with the $\downarrow 3$ Carel stopped for a minute. Wiestke had underled her Ace. Surely she is asking to ruff something. A diamond seems to be obvious then. But she did lead her lowest heart, the 4! Surely she is asking for a club return! Even holding a singleton club he decided that he had to trust his partner and duly returned his club that was in fact ruffed.

Well done! A nice lead and a real show of trust. Unfortunately not many matchpoints were won, since the difference between -680 and -650 is just 3 matchpoints on board 22. Still it's a very nice defence and it deserved more.

I wonder if I would have returned a club in the same situation with my regular partner... Well, if I played with my wife (a mistake I don't do anymore these days) I'm quite sure I would. Not that I would expect her to ruff, but I would be thinking: "I might get a bottom on this board but I will be nagging her for weeks with this. Yes... I must think of intelligent ways to slip 'So you wanted a diamond return and led your lowest heart'into conversations".
